

“The Warriors” project at GoIT Romania Academy

While working on a very important class project, I gained leadership experience by being chosen to be the Team Leader of my group. I was responsible for daily work progression as well as scheduling and holding daily meetings and keeping track of all our work stages on the task manager platform, Trello. Even though some of those were meant to be done by our team’s Scrum Master, at times when my colleague could not attend, I took over her responsibilities. I created our team’s logo, a colleague came up with our name, and each member did its part in the end. I was lucky to have such active and responsive teammates.

Here below I’m asking you to take a peek at our work, I will also be mentioning what I contributed with during the development of this project.

WARRIOR MEMBERS

Scrum Master - Miruna

Team Leader - Ionela

Tester - Georgiana

Tester - George

Tester - Aurelia

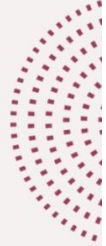

Tester - Raluca

CA\$HIFY

- Welcome to **Ca\$hify**, a compact yet powerful finance app designed by **Go IT Global**.
- By using this, you can effortlessly track your income, expenses, and balance, keeping your finances in check.
- Our dedicated team is rigorously testing the user interface, ensuring that both functional and non-functional aspects of the app meet the highest standards.
- The goal is to provide a seamless and intuitive experience for our users.

CRITICAL ERRORS FOUND BY TEAM

- **Scrum Master - Absence of Terms&Conditions function on Ca\$hify**

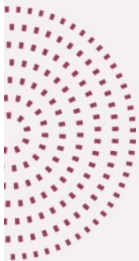

- This website offers finance management tools but lacks a terms and conditions section

- **Team Leader - Signing up**

- Signing up on this site requires manual entry of information, as it does not support direct registration with Gmail account

- **Tester Georgiana - Testing UI**

- The interface lacks accessibility features for disabled individuals, and the language bar is ideally positioned in the upper right corner for improved usability

CRITICAL ERRORS FOUND BY TEAM

- **Tester George - Logo function**
 - When clicking on the logo, no action is initiated, leaving the interface unresponsive to the intended command
- **Tester Aurelia - Environment compatibility on Android 14 version**
 - Testing the financial app on Android 14 to assess its performance across varied environments. Transactions are listed, with product categories displayed in Ukrainian, when language set for English
- **Tester Raluca - Calendar function**
 - Calendar data appears only when clicking the date format near the icon, not directly on the calendar icon itself

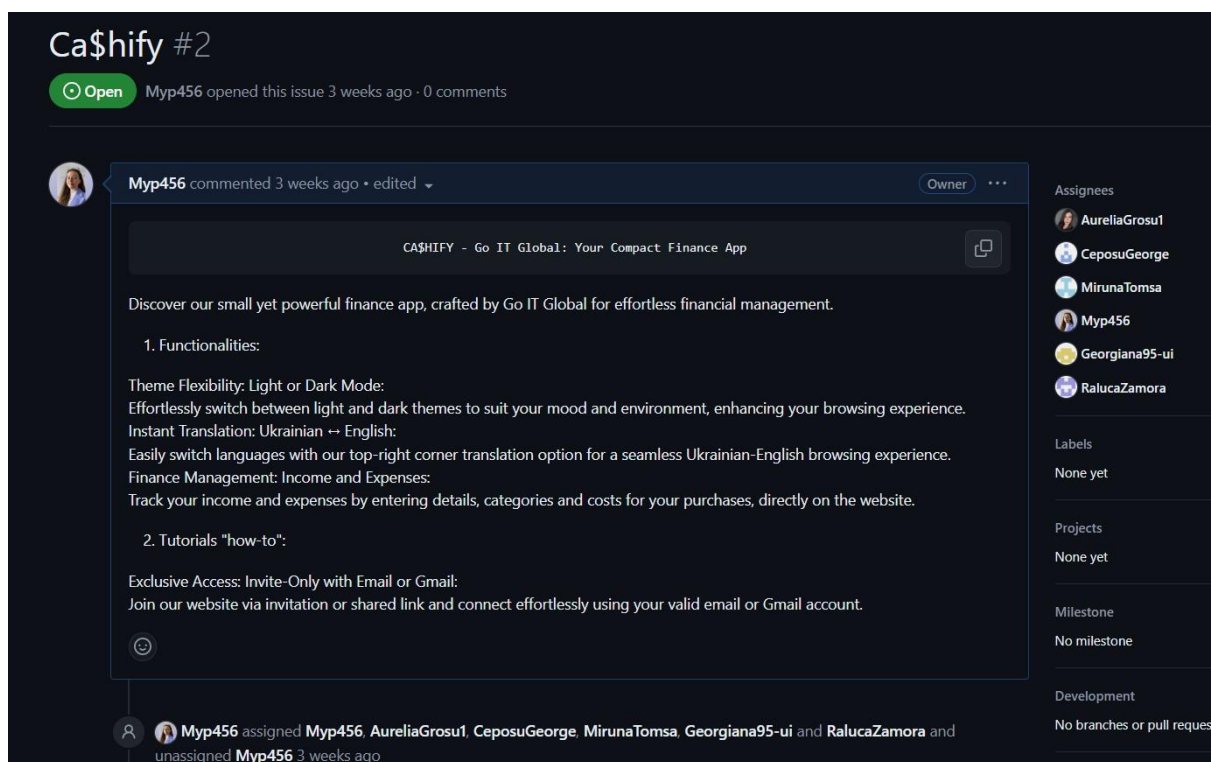

TECHNOLOGIES USED

<u>Test Levels</u>	<u>Black-box Testing</u>	<u>Functional Testing</u>	<u>Non-F. Testing</u>
<ul style="list-style-type: none">- Unit testing- Integration testing- System testing- Acceptance testing	<ul style="list-style-type: none">- Equivalence partitioning- Boundary value- Decision table	<ul style="list-style-type: none">- Tested application UI- Tested basic usability- Performed smoke, sanity, user acceptance etc. tests	<ul style="list-style-type: none">- Performance testing- Environment compatibility- Security testing

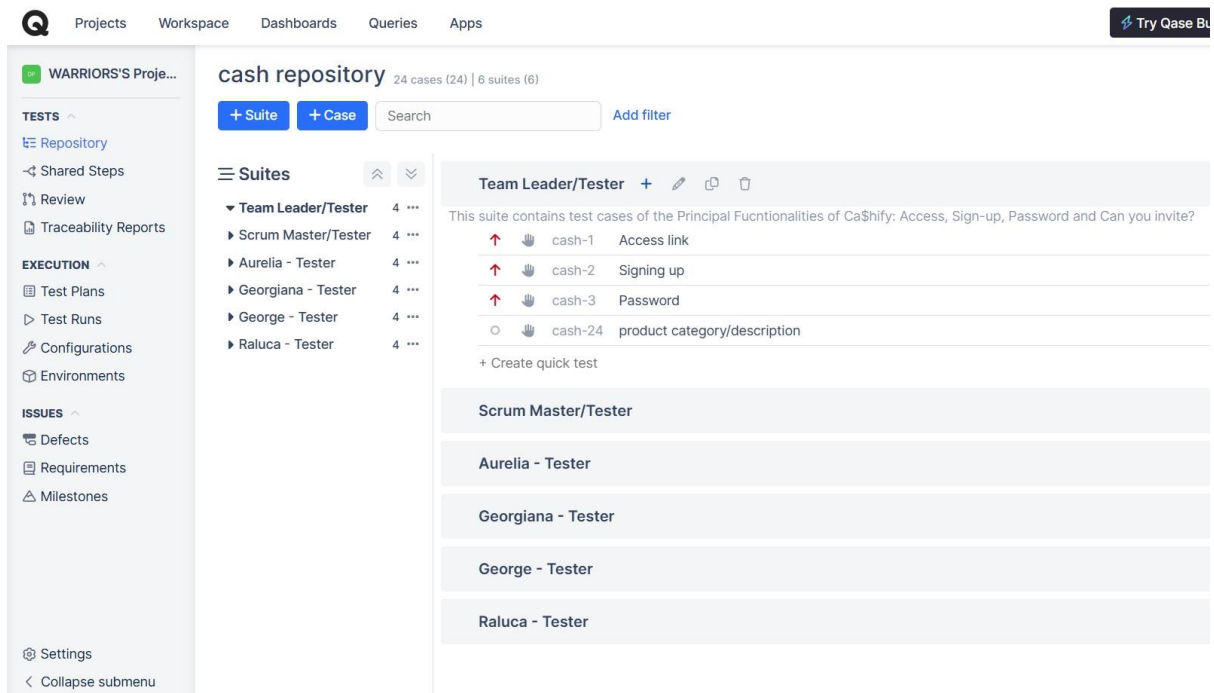

TOOLS: Qase, Jira, Trello, GitHub

- For this project I entered the documentation information in the GitHub application:

- I used Qase tool for test cases. I created the section of each member for the test cases, those in the suite called "Team Leader" were my responsibilities

- I introduced bug reports in the Jira tool, I created a section for each member by name, so that everyone could enter their reports as efficiently as possible

The screenshot shows the Jira application interface. The top navigation bar includes 'Your work', 'Projects', 'Filters', 'Dashboards', 'Teams', 'Assets', 'Apps', and 'Create'. The main header shows 'Project GoIT' and 'WARRIOS'S PROJECT for Ca\$hify'. The left sidebar has sections for 'Queues', 'Board', 'Service requests', 'Incidents', 'Problems', 'Changes', 'Post-incident reviews', 'OPERATIONS', 'KNOWLEDGE', and 'DIRECTORY'. The main content area displays a table of 24 issues with columns for Request Type, Key, Summary, Reporter, Assignee, Status, and Created.

Request Type	Key	Summary	Reporter	Assignee	Status	Created
	TP-13	Verify language switch functionality on the website.	Ioana Anton	Miruna Tomsa	OPEN	28/Jun/24
	TP-12	Changing website theme	Ioana Anton	RALUCA ZA...	OPEN	28/Jun/24
	TP-11	Calendar function	Ioana Anton	RALUCA ZA...	OPEN	28/Jun/24
	TP-10	Scrolling bar function	Ioana Anton	RALUCA ZA...	OPEN	28/Jun/24
	TP-9	"Current Period" function	Ioana Anton	RALUCA ZA...	OPEN	28/Jun/24
	TP-8	Input data in Balance	Ioana Anton	Georgiana r...	OPEN	28/Jun/24
